

SUSTAINABILITY AND ESG ADVISORY

Nilgiri Advisory

Bengaluru, India

Reporting that survives scrutiny.

Four areas, one standard of rigour

02

Carbon footprinting

Scope 1, 2 and 3 inventories to the GHG Protocol Corporate Standard. Screened before they are measured.

Disclosure and reporting

BRSR to the SEBI format, and GRI-aligned reporting for voluntary and investor-driven disclosure. Built to hold up when the assurer arrives.

Compliance

EPR registration and annual returns on the CPCB portal. ISO 14001 environmental management systems, kept audit-ready.

Capability building

Workshops for sustainability teams, plant managers and procurement, built around your sector rather than generic slides.

Fit is a two-way test

We are a good fit if

- ✓ You are a listed company preparing a BRSR filing
- ✓ You are a mid-market manufacturer or exporter measuring for the first time
- ✓ You have been asked for emissions data by a customer, an investor or a regulator, and are not sure where the numbers come from

We are probably not a good fit if

- ✗ You want a sustainability report without measuring anything first
- ✗ You need certification rather than preparation. We are not a certifying body

Sectors we work in: auto components, textiles, speciality chemicals, industrial services.

Three steps, documented at each one

04

01

Scope

We agree the boundary, the reporting period and the audience for the output before any data is collected.

02

Measure

We build the inventory to the relevant protocol, screen Scope 3, and record every assumption and caveat as we go.

03

Assure

We prepare the evidence base to survive assurance, then leave your team able to run the next cycle.

Small team by design

*The person who scopes your
engagement is the person who
delivers it.*

Meera Sundaram Principal

Fifteen years in GHG accounting and assurance readiness, previously in a Big Four sustainability practice.

Arvind Nair Director, Compliance

EPR and ISO 14001. Six years inside a manufacturer's EHS function before moving to advisory.

Kavitha Iyer Senior Consultant, Reporting

BRSR and GRI. Built disclosure for listed entities across auto components, textiles and speciality chemicals.

No proprietary scoring, no black box

GHG Protocol

Scope 1, 2 and 3 accounting

BRSR

SEBI disclosure for listed companies

GRI Standards

Global reporting baseline

ISO 14001

Environmental management systems

EPR

Producer responsibility, CPCB

We report to the framework your assurer, your regulator and your investors already use.

TYPICAL ENGAGEMENTS

What it usually takes

Multi-site and multi-entity work runs longer. We say so at scoping rather than at delivery.

07

Scope 1 and 2 footprint, single site

6 to 8 weeks

Scope 3 screening, fifteen categories

about 4 weeks

BRSR preparation

8 to 10 weeks

GRI-aligned report, including design

10 to 12 weeks

EPR registration

3 to 4 weeks

ISO 14001 readiness

by scope

A call, then a written scope

Every engagement starts with a **scoping call**. You get the scope in writing with a **fixed fee** before any work begins.

We do not quote before scoping, because this work varies enormously by site count and data maturity. A quote given before we understand your data would be a guess, and you would end up paying for the guess.

WHAT WE NEED FROM YOU TO SCOPE

- | | | |
|-------------------|---------------------------|---------------------------------|
| 01 How many sites | 02 Which reporting period | 03 Who is asking for the output |
|-------------------|---------------------------|---------------------------------|
